GREENLOOM

Carbon Tax

Background

- Malaysia's 2026 Carbon Tax regulations

Challenges

Data
Fragmentation

Human errors

Time constraints

Main Goal

- Simplify the complex process of carbon accounting by automating data collection.
- Improve accuracy and efficiency.

Carbon Emission Factors

- Total liters of petrol used.
- Total kWh of electricity from the monthly utility bill.
- Total kg of waste sent to a landfill.

API USED

- GLM 5.1
- GROQ

TOOLS USED

- Streamlit
- SQLite
- JSON
- Ilmu AI API
- ZhipuAI SDK
- Regex (re module)
- Base64 encoding
- OS module
- Groq API
- Datetime module
- requests
- pdfplumber
- FPDF
